

Business Advantage Through Digital Transformation

Li9 Technology Solutions helps companies optimize their existing IT infrastructures, leverage hybrid cloud environments, and build DevOps infrastructures that modernize and automate application development. Li9 enables businesses to transform their IT service delivery to help them accelerate innovation and deliver transformative business solutions.

Li9 has helped some of the greatest companies in the world by leveraging the Li9 Solutions Portfolio of best-in-class technologies and services to deliver business services fast, at scale, and more effectively to provide them a competitive advantage. With an extensive array of elite technical certifications and credentials, Li9 is recognized by partners for commitment to excellence and its focus on delivering exceptional customer service.

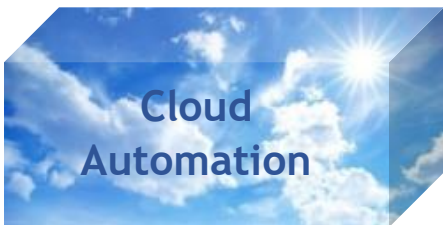

Li9 Solutions Portfolio

Continuous application delivery is the ultimate value of IT to end-users. Li9 architects and integrates a number of key Open Source technologies to create DevOps environments that meet customers specific requirements, and that modernize application platforms, drive agility in the development processes, and optimize team collaboration.

- Streamlined Development Pipeline
- Platform-as-a-Service (PaaS)
- Container Management
- Unified Communication
- End-User Computing

Li9 has been on the forefront of the shift to the software-defined data center and infrastructure automation in hybrid multi-vendor cloud environments. Our combination of traditional IT operations expertise with real-world automation experience positions Li9 to uniquely deliver holistic cloud solutions for complex business processes.

- Service Management
- Private, Public, Hybrid, and Multi-Vendor Cloud Solutions
- Software Defined Networking and Load Balancing
- Automation & Orchestration

Li9 offers a diverse solutions portfolio, consultative approach, and powerful assessment tools to simplify and standardize infrastructure while improving performance and availability. Li9 provides system integration, global logistics, and financial services to optimize supply chain delivery.

- Automation Servers & Storage
- Networking, Load Balancing & Security
- Converged & Hyper-Converged
- Virtualization & Management
- Software Defined Storage

Consultative Approach

Li9 has a unique solutions architecture team with an extensive array of elite technical certifications and credentials organized into cross-functional pods. This enables us to take a holistic approach focused on the whole solution – the people, processes and technology – that can enable you to achieve your goals. Further, our team takes a consultative approach working closely with our clients based on their unique requirements and providing options based on risk and cost to help select the best solution.

Business Transformation Architectures

Li9 Architects continuously researches and validates technologies to bring multi-vendor integrated solutions and reference architectures to our customers for rapid implementation and value delivery, using hybrid environments. Li9’s architecture services provide strategic, unbiased advice about infrastructure strategies and technologies supported by unmatched industry knowledge and capabilities. Li9 provides services to help companies modernize and automate IT by implementing, integrating and operationalizing best-in-class technologies, and automating end-to-end business processes. Each step of our Architect, Build, and Run methodology produces deliverables that support and guide organizations throughout the project, and our unique consultative approach focuses on enabling sustainable customer success.

System Integration

Li9 partners with our customers to deliver fully integrated and tested systems while managing multi-vendor supply chains, inventory management, and time lines. By eliminating on-site installation, we cut lead times and reduce risk through simplified verification of components. As part of the custom system integration and testing, Li9 also provides advanced architecture, design, and engineering services to complement predictable and consistent integrated solution delivery.
